 Artem Khizhniak

New graduate with one year of freelance working experience as a Web Developer who is highly motivated, results-oriented, and has hands-on knowledge in building responsive and user-friendly websites. Always open to self-improvement. Therefore, as a freelancer, I had the chance to learn how to work with clients closely, my responsibilities in the projects, and expectations from my work.

Now I am looking for a permanent role to build my career in a more professional approach while I keep improving my skills to be a better web developer.

Working Experience

Freelance web development *Istanbul, Worldwide* 2023 – present

As a freelance web developer, I developed and maintained websites for various clients, focusing on user experience and responsiveness.

On all the projects, I always start with designing mockups with Figma to be certain about expectations and the deliverables. And after approval from the clients, I start on creating functional web pages based on those mockups, which makes me work faster with a much shorter revision period.

I would like to share some of my projects:

borisova-jurist.ru: a Russian lawyer's website, which always posts new content. Therefore I programmed a content management system from scratch, which has authentication, REST API integration, and Mongo DB integration. Also, for better performance and scalability, I refactored the website from pure HTML to React. With new features like a newsfeed and smoother animations, I designed a much better UX, and as a result, the traffic of the website has increased by 30%.

Istanbul Guide (experience.istanbul): On this project, my responsibility was designing UX while developing a fully responsive website with existing page designs, while delivering according to schedule. And I have completed the project ahead of its deadline.

The Burger Company – Website Menu

(the-burger-company.netlify.app): This was a multi-level database to work with such complicated objects as dishes in the menu with info in both English and Turkish languages. Also, I have created an authentication for an administrating panel to edit existing menus and add new items in the future.

Education

React (Online)

Can She Code, Inc. – Montreal, Canada

12/23 – 04/24

JavaScript (Online)

Can She Code, Inc. – Montreal, Canada

02/23 – 07/23

Development with HTML/CSS (Online)

Can She Code, Inc. – Montreal, Canada

09/22 – 11/22

College of Communication and Informatics

Rostov-on-Don, Russia

09/20 – 07/22

Interests

- Technology
- Urbanism
- Consumer Electronics

 Artem Khizhniak

Passionate, hardworking and ready to take responsibility.

I am Artem Khizhniak who was born on 11.04.2004 in Russia and I am a web developer with an urge to keep himself up-to-date about the new trends in his profession.

I have studied Communications and Informatics at Rostov - on - Don College in Russia and I am constantly taking online trainings to improve my skills as well as to be able to deliver the projects in the most recent and efficient formats.

Since the beginning of the war between Russia and Ukraine, which I am completely against as a person who believes and trained in communication; also as a designer who always works for finding/creating solutions, I left my country and started to live in Istanbul.

I am fluent in English and learning the Turkish language at the moment. However, I am a really team player and easygoing person who is also very open-minded. Therefore, I am very confident about myself to become a part of any team, fast.

I have professional skills in HTML/CSS, JavaScript, React, APIs, Figma, Web Design, Redux, UX/UI, Git, GitHub. And while I am looking for a permanent role in a team, I started to work as a freelance web developer. During this period, I had some clients from Russia as well as from Türkiye.

I really love Türkiye and İstanbul. To be honest, I would love to call here my home. But to make this real, I mean to be completely located here, I need to find a job which should be a permanent one.

Full-time work is essential for me from many aspects such as to obtain a work visa, to balance my finances for my expenses and more importantly even though I am a freelance web developer who is able to complete projects by himself, with a permanent role I will have a chance to work with some experts in my profession as their teammate which is a must to become a better web developer, to become an expert someday.

I would kindly ask you to consider me as a candidate for the role. Hopefully, I will have a chance to meet and work with you and your team if it is possible full-time, however, I am still open for freelance projects as well.
